

Partner File

Robert King u1001542

Partner: Kevin Lund

My strategy was to backtrack and try to follow the method calls from the main file of ffmpeg.

However, after 3-4 hours this was a dead end and did not help at all. My partner Kevin used the command `grep` to search through files with key words of the 3 file types. Using this command my partner was far more effective and found the decoder files for each file type.
